Air Freight

Supply chain demand keeps changing from time to time creating pressure to deliver on time. Air Freight service offers 2 choices: Preferred and Differed Services. This combination is delivered with price and time taken to deliver to meet customer's needs. Speed and reliability are the key elements of Air Freight without compromising the safety of the cargo.

Preferred Air Freight Service

Preferred Air Freight is an Express Service. Critical shipments like vaccinations, high-value products, emergency goods, medical or scientific instruments, and just-in-time deliveries within 24/48/72 hours are delivered on time. Our global network and association with carriers allow us to choose the airline that could meet the need of the customer to make sure delivery is made within the time frame.

Normal Air Freight Service

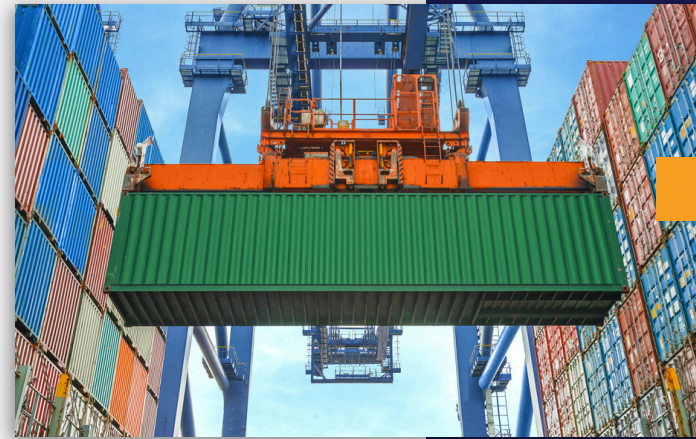

Rates are important even though the shipment is by air. We allow customers to choose from the fixed departure schedules where the transit is normally between 3-5 days

Economy Air Freight Service

We allow our customers to choose airlines of their choice based on price and the transit time which is between 5-7 days. This allows our customers to keep the cost in check, so that they are competitive with their products and services.

Sea Freight

Araikkal Global Freight works with all major shipping lines across the globe, we ensure that your cargo reaches the right destination. Choosing the right service with a cost-effective solution, our network reach and shipment volumes provide us to offer the extra edge in pricing. Our system provides the tracking and monitoring of your shipment till the last mile delivery, which helps to manage supply chain challenges. We are fully equipped and capable of providing Door-to-Door pick-up & delivery and other services in between. We are resourceful with multiple container types that suit our client's product line.

Full Container Load (FCL)

Our contract rates and services with lines allow our customers to choose between shipping lines and sailing schedule flexibility. We serve more than 500 ports across the globe. This reach gives us an edge over the competition.

Less Container Load (LCL)

Small or big, all-size shipments matter to us. At Araikkal Global Logistics, our Console Service is available to all major ports from UAE and into UAE providing the flexibility our customers are looking for.

Special Equipment Movement

Different types of economic goods require transport container which is perfectly adapted to product properties and at the same time allow standardized and cost-effective loading.

Open Top/Flatrack/Reefer Container

Open Top are open containers. The Flat rack has two front walls and no side walls and roof. Reefer is an intermodal refrigerated container that transports temperature-sensitive, perishable cargo, meat, and similar items.

Project Cargo

Araikkal Global Freight has a specialized Project Cargo Team that creatively manages and carries out the logistics related to industrial projects and project cargo, both oversized and Heavy Lift.

That which cannot be fitted in a conventional container and is visibly oversized needs creative options to ship from starting point to its destination. No matter the place, or the complexity of the dimensions of the project cargo, Araikkal Global Freight can transport any heavy lift or oversized cargo to its final destination. This requires smart planning from the first stages to avoid extra costs and to manage all the regulative aspects, like taxes or customs compliances.

Our dedicated Project Cargo team has wide experience in felicitating dedicated project cargo logistics for Oil & Gas, Renewable Energy, Mining, Port Equipment, Rail and Manufacturing industries.

Our team analyses the scale of the project and coordinates all the necessary resources to accomplish the delivery with the greatest efficiency.

Customs Brokerage

Araikkal Global Freight provides Customs Brokerage services for all types of shipments and delivery of goods across geographical borders for individuals and organizations.

Each country operates under a different set of rules and regulations regarding the transfer of goods entering or leaving their borders. Customs regulations and laws concerning the import and export of goods are constantly changing all over the world, sometimes even daily.

Araikkal Global Freight is responsible for knowing all of these rules and regulations and ensuring that they are followed, to streamline the process of shipping goods as much as possible for the clients. In effect, we alleviate the stress of dealing with customs officials and learning shipping regulations so that their clients can focus on their business productivity.

In nutshell, Araikkal Global Freight serves in effect as a translator, communicating with agencies and the government throughout the shipping process, to ensure that all of the proper procedures have been followed.

Reverse Logistics

Reverse Logistics refers to the supply chain process of returning products to manufacturers or retailers. As of today, OEMs dominate the manufacturing sector and industries are allowed only to buy from OEMs. But they don't have their presence in every market, so the end-user has to send the damaged goods back to the original manufacturer to get it corrected as they don't have any other choice. Following are the main types of reverse logistics Services that we offer.

Returns Management

As the most common reverse-logistics process Returns Management deals with regular customer returns and represents a seamless, hassle-free experience to boost customer loyalty and brand image.

Return Policy and Procedure

This is the policy against which all customer returns are measured and followed consistently by both customers and employees alike. It's a good practice to keep these policies visible and easily accessible to customers.

Remanufacturing or Refurbishment

Reconditioning products that are returned prevents organizations and retailers from forfeiting profit (or losing money) on defective products while eliminating unnecessary waste.

Exhibition Logistics

Araikkal Global freight assists Manufacturers/OEMs/Corporates that are participating in exhibitions abroad and in UAE in every way by transporting their exhibition display material right up to the venue of the event. We play a key role in bringing their equipment to the event in a timely manner, ensuring our clients have a hassle-free exhibition experience.

We are specialists in exhibition and events freight forwarding, handling every last-minute detail across international venues. Our service includes transportation, customs advice, and on-site assistance.

As Exhibitions, Trade Fairs & Events Specialists, we offer you peace of mind by taking all of your logistics worries and finding the solution to each of them. We assign a dedicated manager along with his team that manages the entire logistics procedure seamlessly.

Dangerous Goods Handling

Araikkal Global Freight offers professional handling of commodities classified as Dangerous goods (DG) or Hazardous Material (HAZMAT) comprising various chemicals, mixtures of substances, manufactured products, or articles that can pose a risk to people, animals or the environment if not properly handled in use or transport.

Many products that we come into contact with daily can be considered hazardous to our health, especially if we come into contact with them. The packaging of substances that have explosive, chemical, radioactive, or biological properties plays an integral part in the transportation of such items, as this prevents their unnecessary exposure to humans and other living organisms.

As a fully licensed and approved Dangerous Goods handler, Araikkal Global Freight has our own dedicated DG handling experts equipped with the necessary equipment and expertise.

Our Services Include Packing & Transportation of Dangerous Goods As Per IATA Regulations

- Class 2: Gases (including flammable and toxic gases)
- Class 3: Flammable liquids
- Class 4: Flammable solids
- Class 5: Oxidizing substances and organic peroxides
- Class 6: Toxic and infectious substances
- Class 7: Radioactive material
- Class 8: Corrosives
- Class 9: Miscellaneous dangerous substances and articles

Data Security

Data security is a practice of protecting digital information from unauthorized access or theft. At Araikkal Global freight, we make sure that our customer's data and information are very much secured to the highest standard.

Our customer's data safety is our highest priority and we go the extra mile to protect it from hackers by every possible means. For this, we deploy cyber security protocols, securing the breadth and length of our logistics network. We constantly update our team with the latest information.

Instead of hiring third-party vendors, we manage Data Security in-house, ensuring no data leakage of our esteemed customers.

We conduct regular data security audits and follow the procedure of checking the systems for the white-hat hackers.
